Research Interests

- Leverage advanced statistical and machine learning methods to reveal correlations and population-level signatures in vast time-domain survey datasets (e.g., ZTF, LS4, LSST) connecting transients to their origins.
- Constrain supernova progenitor demographics via simulation-based inference using early and late-time observations.
- Build open-source tools for efficient and reproducible astronomical data processing and analysis.
- Simulate repeating tidal disruption events with hydrodynamical methods to probe extreme transients.
